supporting your precision

The **MPCT2X** reticle features an open concept design above the primary horizontal crosshair as well as other enhancements to make this minimal tree style reticle extremely easy to use. The upper half of the reticle has the vertical crosshair only extend up to 3.0 Mills which provides sufficient hold-under capability and maintain a clear view for spotting trace as the bullet tracks toward the target. The open concept above the horizontal crosshair also allows for easier spotting for other shooters in the field.

This reticle design features 0.2 Mil indications throughout the vertical, horizontal, and tree portions of the reticle. We have included floating dots at every whole mil point to assist both visually identifying these points as well as enhance the precision of aiming on target.

Along the bottom edge of all horizontal portions of the reticle we have 0.2 Mil hash marks that are visually distinguished by line lengths. The shorter lengths are at 0.2 and 0.8 Mil while the 0.4 and 0.6 Mil marks are slightly longer. This aids in rapid identification of these different hold points. Along the top edges we have a single hash mark at the 0.5 Mil location making this a very fast hold point to acquire anywhere in the reticle.

The **MPCT2X** reticle is the most modern reticle design on the market featuring easily distinguished hold points. The features of this reticle make it extremely intuitive and fast to use in the field under a multitude of shooting scenarios.
